FIG. 14

FIG. 13 is a top-down cross-sectional view of a circular device 1330. The device consists of a central circular core 1332, surrounded by a ring 1334. This ring is further divided into four quadrants by two perpendicular lines 1336. The outermost layer is a thick, circular rim 1340. A squiggly arrow points from the label 1330 to the center of the device.

FIG. 14 is a perspective view of the components of the device 1330. It shows five separate parts: a curved, wedge-shaped segment 1338, a curved, wedge-shaped segment 1336, a central cylindrical core 1332, a curved, wedge-shaped segment 1334, and a curved, wedge-shaped segment 1340. A squiggly arrow points from the label 1330 to the central cylindrical core.

FIG. 15 is a perspective view of a cylindrical component 1350. The component 1350 has a top surface 1352 and a bottom surface 1355. The top surface 1352 features a central circular opening 1353 and four smaller circular openings 1354 arranged around it. The bottom surface 1355 also features a central circular opening 1353 and four smaller circular openings 1354 arranged around it. The component 1350 is shown with dashed lines indicating internal features or a cross-section.
